

Total Marina Package – Graphic Designer

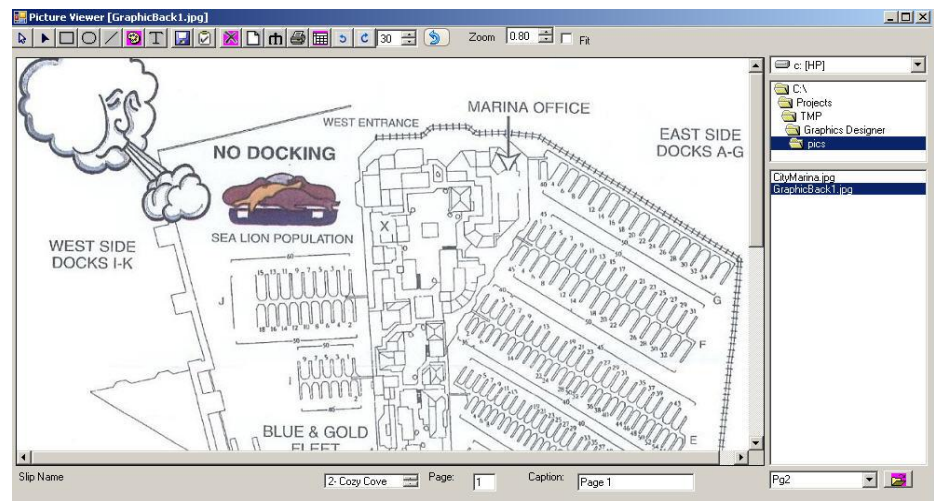

Main Window

The Graphic Designer is a stand-alone program distributed at no charge as part of the Total Marina Package suite.

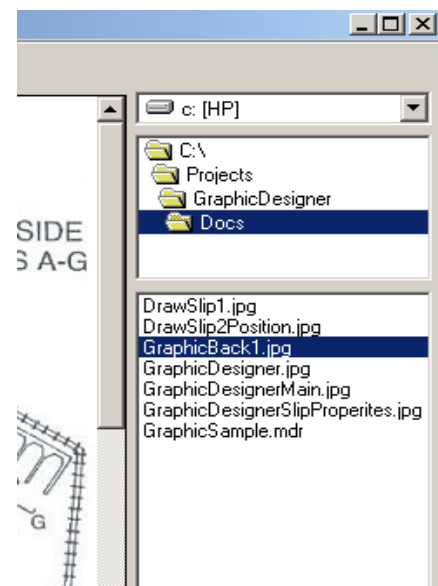

The Graphic Designer is an advanced graphics application that allows you to create and modify your property maps at any given time. No longer do you have to pay hundreds or in some cases thousands of dollars then wait months for your software vendor to change your graphic. With the Total Marina Package you have the ability to make changes yourself easily.

Loading a Background Image

To start creating your graphic you need to have a picture (.jpg, .bmp, .gif) to use as your background image. The background image can be an aerial shot of your marina, a map of your marina you normally hand-out to your guest, or a simple background you created using the windows Paint application.

Loading your background image is as simple as selecting the location of the image file. Clicking on the filename will display the graphic in the Designer's editing window.

Drawing Slips

Drawing the slips is as simple as clicking the Square  or Round  slip toolbar button, then using the mouse click and drag the slip onto the Graphic Designer editing window at the location you want the slip to be located.
